

Feature	Mitigation strategy
PRD_FOREIGN_BORROWER	Train models with and without this feature. Remove it if CRD_MONTHS_TU, CRD_SCORE_bin, and BORYREMP already explain its predictive power. If retained, require governance approval.
POD_MARKET_CODE	Group markets into broader segments and test temporal stability. Remove it if performance degrades significantly across years.
POD_SOURCE_OF_BUSS_TYPE	Treat it as a challenger feature. Remove it if its importance fluctuates materially across time periods.
CRD_MONTHS_TU	Bin the variable and compare models with and without BORYREMP. Keep both only if each provides independent lift.
PRK_OCCUPANCY	Run a controlled analysis after fixing ACTLTV, TDSR, and GDSR. Remove it if risk differences largely disappear.
PRK_TENURE	Evaluate its effect separately by region. Remove it if its predictive power is concentrated in only a few markets.
PRK_PROPERTY_TYPE	Evaluate its effect after controlling for geography and affordability. Merge categories if one category is driving the entire effect.
PRK_CONS_TYPE	Test stability across origination years. Remove it if its relationship with bad events changes materially over time.
