

Feature	Mitigation Action
PRD_FOREIGN_BORROWER	Train models with and without the feature. Remove it if CRD_MONTHS_TU, CRD_SCORE_bin, and BORYREMP already explain its predictive power. If retained, require governance approval and document the business rationale.
POD_MARKET_CODE	Retain. Validate that the stable risk ordering ($C > B > A$) reflects market conditions rather than demographic concentration and document the economic rationale.
POD_SOURCE_OF_BUSS_TYPE	Retain if channel-level risk ordering remains stable across years. Reassess if underwriting practices or channel mix materially change.
CRD_MONTHS_TU	Bucket the variable and ensure it adds information beyond CRD_SCORE_bin. Avoid excessive reward for very long credit histories.
PRK_OCCUPANCY	Retain. Validate that its effect remains after accounting for ACTLTV, TDSR, and GDSR.
PRK_TENURE	Retain. Prevent the Leasehold (L) category from disproportionately influencing the model due to very small sample sizes.
PRK_PROPERTY_TYPE	Retain. Monitor rare categories (especially Mobile M) and prevent small-volume categories from disproportionately driving the model.
PRK_CONS_TYPE	Retain. Reassess only if its relationship with bad events changes materially across housing market cycles.
